

Name - Nandita Singh
Regd No - 2141019333

Task - 1

Components

- 1) Scheduler -
 - i) Controls the way in which processes are given to the CPU for running.
 - ii) Takes care of multitasking, determines which process should execute next and enforces good and equal CPU usage by allocating priorities and time slices.
- 2) Memory management
 - i) Controls the memory resources of the system.
 - ii) Performs memory allocation and deallocation to processes, enforces virtual memory, paging and provides memory protection and isolation among processes.
- 3) File System
 - i) Manages storage and retrieval of data from disk.

- 3) Supports various file systems, manages data blocks and metadata and handles system calls for files (such as open, read, write).
- 4) Network Stack -
- i) Coordinates all network operations and communications.
 - ii) Executes protocol such as TCP/IP manages packet reception, socket communication and makes data delivery to its destination reliable.
- 5) Device Drivers
- i) Hardware - Software interface
 - ii) Abstracts hardware specifics so that the kernel and applications can communicate with hardware using a standard API.
