

Name - Nandita Singh
Regd No - 2141019333

SDLC

Assignment - 1

1. Requirements (The foundation) - Collect and analyze user & business requirements.

Importance

- i) Forms the foundation for the entire project.
- ii) Avoids scope creep and misaligned expectations.
- iii) Saves time and expense by defining objectives early.

2. Design (The Blueprint) - Develop technical architecture and UI/UX design.

Importance

- i) Create a clear plan of action for developers.
- ii) Avoids future rework with good planning.
- iii) Align technical structure with business logic.

3. Implementation (The Build phase) - Write, compile and integrate code modules.

Importance

- i) Brings design into a working product.
- ii) Significant milestone of physical progress.
- iii) Needs clean, sustainable and effective code.

4. Testing (The Quality gatekeeper) - Validate and verify code using different testing techniques.

Importance

- i) Makes the product bug-free and dependable.
- ii) Increases user satisfaction and confidence.
- iii) Detects problems before reaching end users.

5. Deployment (The launchpad) - Publish the product to users.

Importance

- i) Deploys real value to stakeholders.
- ii) Offers scope for real-world feedback.
- iii) Marks the shift from development to operation.

Sequential flow

Requirements → Design → Implementation → Testing → Deployment
