

Assignment - 2

- Community Events Planner app.

1) Objective of the app - To develop an app for people in a neighbourhood to easily plan, organize and attend nearby events - such as clean-up activities, seminars or fiestas.

2) Who will utilize it:

Organizers - individuals who stage the events.

Residents - individuals who wish to attend.

Volunteers - individuals who are willing to assist.

* Key Requirements

1. Functional requirements -

i) User Registration and authentication - users need to register and log in securely.

ii) Invitations & RSVP tracking - facilitate event organisers to invite attendees and monitor RSVPs.

iii) Collaboration features - enable chat, discussion boards and task delegation for event organization.

iv) Scheduling & Reminders - Enable calendar integration and automated reminders.

v) Resource sharing - Enable uploads of documents, images and location information for event organization.

vi) Ticketing and fundraising - Have payment gateways for fundraising and ticketing integrated.

2. Non-functional Requirements.

- i) Scalability - Handle more users during peak events.
- ii) Performance Optimization - Have fast loads and low downtime.
- iii) Cross-platform Support - Be extremely compatible with web, iOS, and android.
- iv) User-friendly interface - Offer intuitive navigation for ease of use.

* Requirements Documentation and traceability.

- i) Documenting - Utilize a requirements specification document with detailed user stories, acceptance criteria and system constraints.
- ii) Traceability matrix - Create connections between requirements, design, development, and testing stages to maintain alignment.
- iii) Stakeholder feedback - Include iterative feedback loops through surveys or direct interaction.
